

RESPIRATION DAY

27TH MAY 2016

AUDITORIUM PAGANINI

PARMA - ITALY

RESPIRATORY MEDICINE, REVIEW OF CURRENT KNOWLEDGE

THINKING TO THE FUTURE

SCIENTIFIC REFEREE: PROF. DARIO OLIVIERI

- 8.45/9.00 **Opening** Dario Olivieri (Parma, Italy)
- 9.00/9.30 **History of asthma management** Peter J. Barnes (London, UK)
- 9.30/10.00 **Year in review in respiratory diseases** Leonardo M. Fabbri (Modena, Italy)
- 10.00/10.30 **Management and prevention of exacerbations and mortality in COPD** Fernando J. Martinez (New York, US)
- 10.30/11.00 *COFFEE BREAK*
- 11.00/12.30 **Innovative approach to chronic diseases diagnosis and management**
Chairs: Paul M. O'Byrne, Peter J. Barnes
- Heart failure without ventricular dysfunction and myocardial infarction with/without coronary artery obstruction Filippo Crea (Rome, Italy)
 - COPD without airways obstruction Fernando J. Martinez (New York, US)
 - Interstitial lung disease with negative CT scan Stefania Cerri (Modena, Italy)
- 12.30/14.00 *LUNCH*
- 14.00/15.30 **Placing the individual at the centre of health care**
Chairs: Alberto Papi, Fernando J. Martinez
- Personalised care in respiratory medicine, progresses and challenges Stephen Holgate (Southampton, UK)
 - Connected medicine, what is the role for e-health in respiratory conditions? Omar S. Usmani (London, UK)
 - App for patients, just "another icon on the screen" or a step toward improving individual health? Dee O'Sullivan (Brussels, Belgium)
- 15.30/17.00 **PROs and CONs session**
Chairs: Klaus F. Rabe, Stephen Holgate
- Can biologics change the way severe asthma is and will be managed? Paul M. O'Byrne (Hamilton, Canada): PRO
Peter J. Barnes (London, UK): CON
Rebuttal
 - Prophylactic antibiotic therapy in COPD Robert Stockley (Birmingham, UK): PRO
Terry Seemungal (West Indies, Trinidad and Tobago): CON
Rebuttal
 - Regular vs as needed approach in asthma Alberto Papi (Ferrara, Italy): PRO
Kenneth R. Chapman (Toronto, Canada): CON
Rebuttal
- 17.00 **Closing Remarks**

2016

RESPIRATION DAY

The respiratory medicine is currently one of the most exciting field in the scientific research, both at the bench and at the bedside level. Through continued research, health care professionals continue to investigate the biological pathways underlying the diseases, with the objective to better phenotype patients with obstructive disorders. At the same time, with the support of new clinical studies, physicians will have the possibility to identify more accurately the most appropriate therapeutic strategies to improve the management of patients suffering from chronic respiratory disorders. These elements inspired the Respiration Day 2016 edition entitled "Respiratory medicine, review of current knowledge, thinking to the future".

In the morning, International experts will review the most updated evidence in the field, allowing the audience to understand new methods for innovative diagnosis and management of the chronic diseases in respiratory medicine.

The early afternoon session will be specifically devoted to a growing relevance subject in medicine: the personalised care, with particular attention to the e-health setting.

The conclusive session, the PROs and CONs one, represents, not only, a novelty for Respiration Day, but also, and, above all, an added value for the event.

Three topics covering 1) the relevance of biologic therapies in severe asthma, 2) the prophylactic antibiotic management in COPD and 3) the regular vs. as needed approach in asthma, will be addressed by major experts, allowing the audience to get a clearer and wider picture on how and where the current medical field is currently moving.

UNIVERSITÀ DEGLI STUDI DI PARMA

Supported by an unconditioned grant from:

Chiesi
