(ITA) Studio delle reti neurali per la generazione di nuove azioni in soggetti normotipici e pazienti con Gravi Cerebrolesioni Acquisite (ENG) Neural networks for the creation of novel actions in individuals with typical development and patients with severe acquired brain lesions
DESCRIZIONE DEL PROGRAMMA DI RICERCA / DESCRIPTION OF THE RESEARCH PROGRAM
(ITA) Il progetto ha l'obiettivo di indagare i meccanismi neurali che sottendono la capacità del cervello umano di generare azioni motorie nuove, mai eseguite prima. Questa abilità è alla base dell'adattamento e della flessibilità comportamentale, ed è di cruciale importanza non solo nello sviluppo tipico ma anche nei processi plastici di recupero che intervengono a seguito di Gravi Cerebrolesioni Acquisite (GCA), in età adulta e nell'età evolutiva. Una parte del progetto è dedicata allo studio, su soggetti sani, delle reti cerebrali coinvolte nella generazione spontanea di nuove rappresentazioni motorie, attraverso l'esplorazione di oggetti nuovi, utilizzando metodiche comportamentali, cinematiche e tecniche avanzate di risonanza magnetica funzionale e strutturale. Una seconda parte estende questi paradigmi sperimentali a pazienti con GCA, integrando stimolazioni visive, uditive, immaginazione motoria e realtà virtuale, con lo scopo di identificare indicatori prognostici affidabili del recupero. La collaborazione tra l'Università di Parma e il Centro Cardinal Ferrari (KOS Group) garantirà una stretta integrazione tra ricerca neuroscientifica e applicazione clinica. (ENG) The project aims to investigate the neural mechanisms underlying the capacity of human brain to create novel actions, never executed before. This ability is at the basis of behavioral flexibility and adaptation, and it is crucial not

only in typical development but also in the recovery mechanisms involved after severe Acquired Brain Injury (ABI), both during adulthood and developmental age. One part of the project is focused on the investigation, on healthy participants, of the neural networks involved in the spontaneous creation of novel motor representations, through exploration of new objects. This will be achieved using behavioral and kinematics methodologies as well as advanced structural and functional magnetic resonance techniques. A second part of the project extends these experimental paradigms to patients with ABI, integrating visual/auditory stimulation with motor imagery and virtual reality, in order to identify reliable prognostic markers for recovery. The collaboration between University of Parma and Cardinal Ferrari Center (KOS Group) will ensure a tight integration between basic research and clinical application.

In the event of renunciation by the winner or in the event of forfeiture of the right to the conferral of the research contract due to non-acceptance within the deadline set by the Administration, the research contract may be awarded to another candidate who has been found suitable according to the order of the respective ranking.

Recruitment is expected to coincide with the date of signing of the contract.
